## .CA

**2.7 million** .CA domains  
with 100% uptime.

## Cybersecurity Services

**100,000** new cybersecurity threats  
blocked daily by D-Zone Firewall.

## Registry Services

Robust top-level domain  
products and services.

### We support initiatives that enhance Canadians' internet experience:

#### Global Internet Leadership

- Support internet governance and standards through global organizations such as ICANN and CENTR

#### Canadian Initiatives

- **11** Internet Exchange Points nation-wide
- **280,000+** internet performance tests conducted last year

#### Community Initiatives

- More than **\$4.2 million** in grants to **102** projects through our Community Investment Program

choose  
**CANADA**

# CIRA Building Canadian IXP's

- Help support a cross-country network of Internet Exchange Points
- ✓ Faster
- ✓ More Reliable
- ✓ Sovereign

## Community Investment Program

Providing funding  
for technology  
based projects and  
research

NORTH ISLAND COLLEGE

- North Island College Centre for Applied Research Technology and Innovation
- Digital Literacy grant
- Youth summer bot camps to expose up to 200 students to programming robotics

- The International Cybercrime Research Centre at Simon Fraser University
- Develop a custom web-crawler to automatically locate websites hosting child exploitation content

- The University of Victoria's Indigenous Law Research Unit
- Produce a video series to provoke and support more complex conversations about Indigenous law and legal issues including, gender, power, sexuality, fairness, community relations, inclusion, safety, change and adaptation and accessibility

# Bridging the gap to secure your DNS

# DNS IS MISSION CRITICAL

**DNS is a mission critical service that requires 100% uptime and low latency**

- During a DNS outage websites, web applications, and email are down
- DNS outages result in brand damage and/or lost revenue
- DNS lookups contribute to website performance

# DNS IS VULNERABLE

## **DNS is vulnerable to failures and attack**

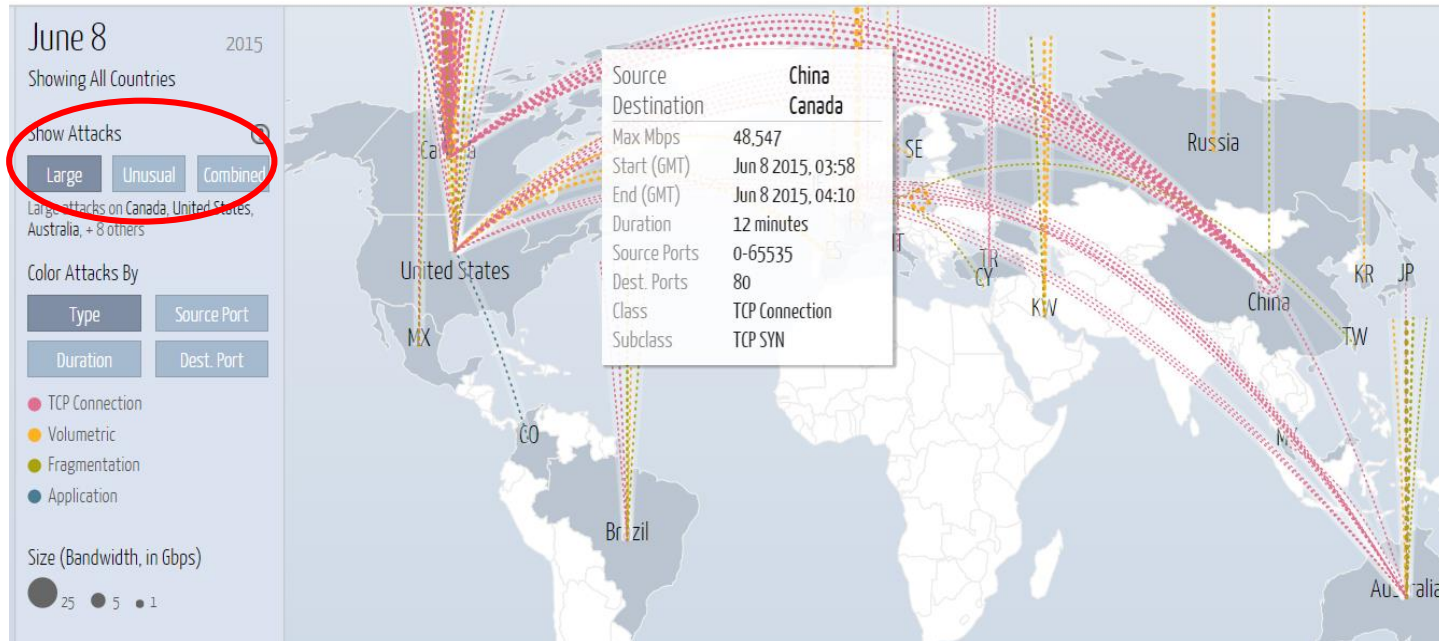

- Numerous Failure Mechanisms
  - Equipment failure
  - Network outages
  - Natural disasters
  - Need diversity
- DNS based DDOS Attacks account for 30% of all attacks
  - DNS as the target
  - DNS as the attack vector
  - DNS attacks are easy to generate and hard to defend

# DDoS Attacks continue to grow as a major threat to online initiatives

Digital Attack Map Top daily DDoS attacks worldwide

## D-Zone anycast global secondary DNS

- Launched 3.5 years ago
- Specifically architected to support Canadians
- Supports all domains; .ca, .com, .net, .org, etc...

BCNET has partnered with CIRA and purchased D-Zone anycast secondary DNS on behalf of all of their members

# D-Zone supporting over 160 Canadian schools

# ANYCAST DNS VS UNICAST

## Unicast – Traditional DNS deployments

- Nameservers are implemented on single nodes, each with a unique IP address

## Anycast – Adding resiliency to your DNS

- Nameservers are implemented on a multiple geographically distributed nodes that share a single IP address
- Layer 3 routing sends packets to the geographically nearest nameserver
- Built in redundancy, failover and load distribution
- Resiliency to DDOS attacks
- Redundancy and fault tolerance
- Enhanced web performance

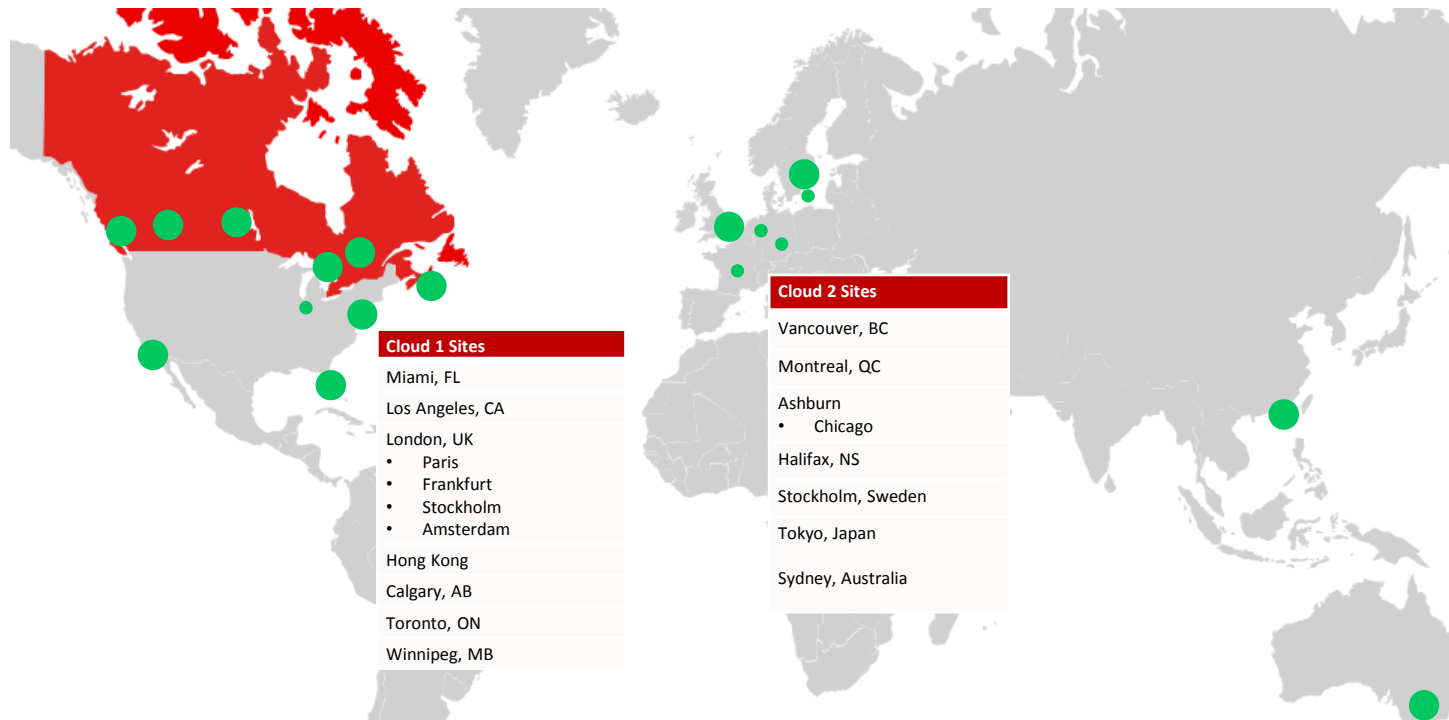

A traditional DNS server architecture uses two unicast servers, often located in the same network.

An anycast architecture uses one or more clouds of servers.

# A GLOBAL ANYCAST DNS SERVICE THAT PUTS CANADA AND CANADIAN TRAFFIC FIRST

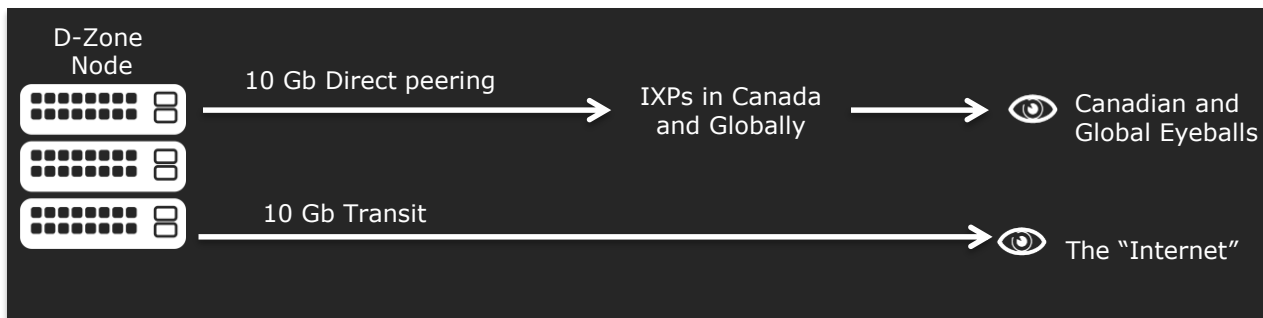

24 globally distributed nodes with a coast-to-coast Canadian footprint

# D-Zone Anycast Architecture Highlights

- 2 Anycast Clouds
- 2 diverse transit providers
  - Hurricane Electric
  - GTT
- **3,000 peering relationships globally**
- Diverse management transit
- 2 load shared DNS servers at each site
- Out of band reporting and data collection

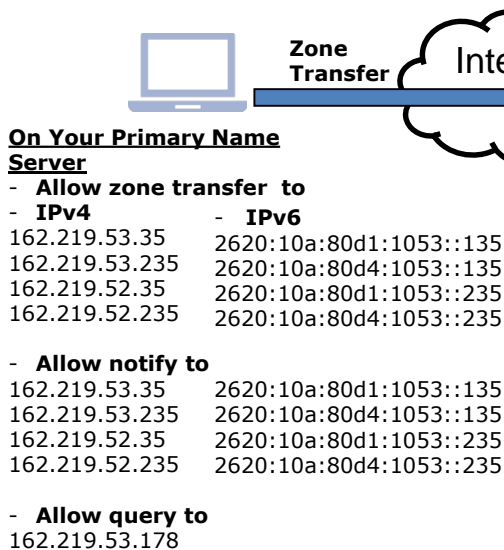

## How D-Zone Anycast Works...

# D-Zone anycast DNS – operational flow

## Step 1

## Step 2

### **D-Zone Hidden Masters**

162.219.53.35  
162.219.53.235

### In the D-Zone Web Portal

- Create your zone owner
- Create your name primary name servers
- Create your zone

## Step 3

### **D-Zone Anycast Clouds**

**DNS Queries**

### At your Registrar

**Add ns1.d-zone.ca and ns2.d-zone.ca as authoritative for your domain**

ns1.d-zone.ca -  
162.219.54.2 ns2.d-zone.ca  
- 162.219.55.2

# Example of DNS Traffic Via D-Zone Web Portal

## D-Zone anycast includes unlimited queries and 24/7 premium tech support

### Contacting Support:

- Email address: [Support@d-zone.ca](mailto:Support@d-zone.ca)
- Email address: [Dnsfirewall@d-zone.ca](mailto:Dnsfirewall@d-zone.ca)
- Phone: 1 (844) 863-9663
- Live chat: available at [portal.d-zone.ca](http://portal.d-zone.ca)
- Emergency off-hours support: (613) 237-0324

# Steps to implementing

- Complete the service agreement (no cost)
- Schedule a 30 minute technical call
- We'll walk you through the portal and live provision your zones with you

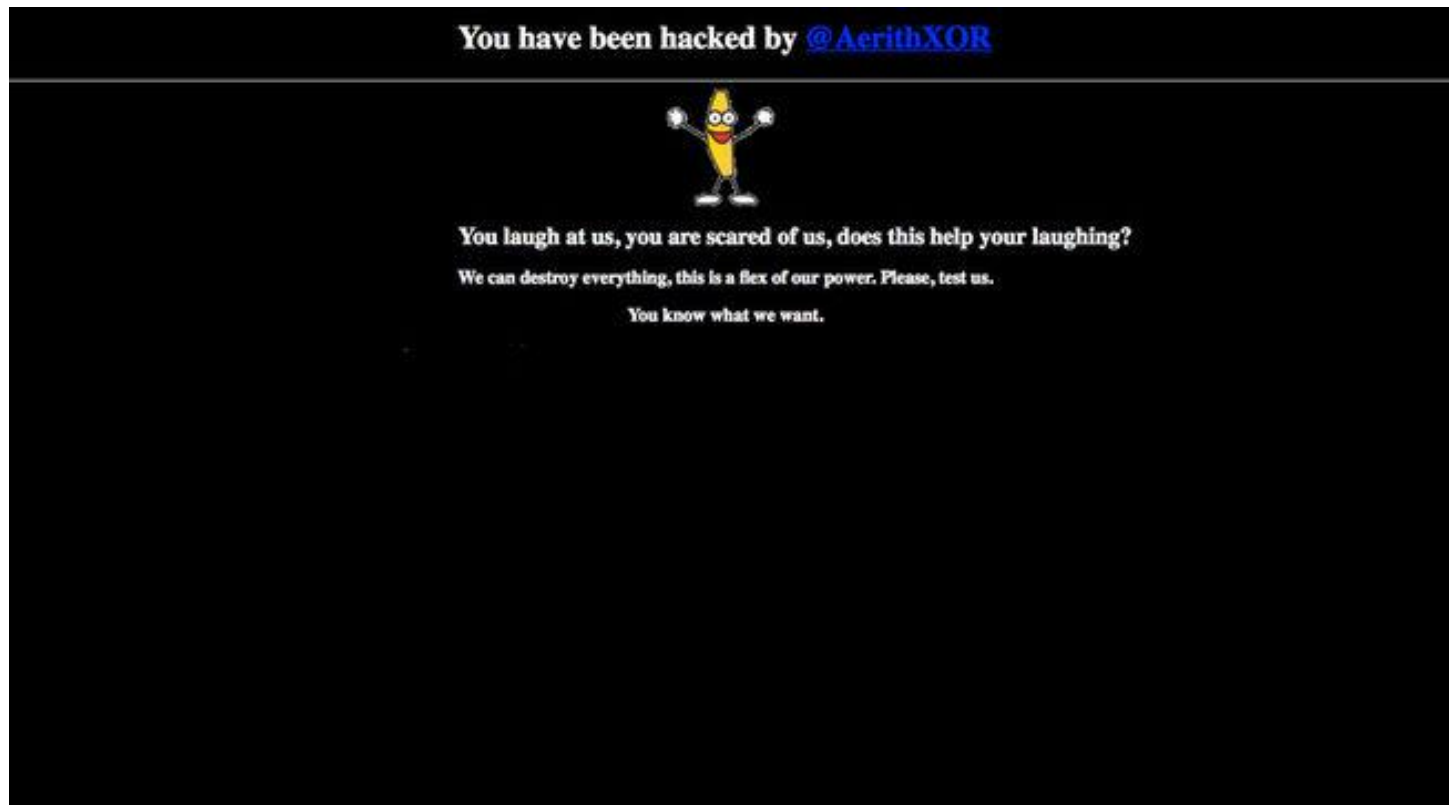

...moving forward

DOMAIN LOCK

It looks like this hack on Canadian city...

HACKED BY

follow my

twitter or ill

dox ur ssns

...or maybe it was "Hammer Time" affecting one  
of our provincial governments

# Domain Hijacking

Domain hijacking can be done in several ways, by exploiting a vulnerability in the registration process when accessing the domain record at the registrar through social engineering.

- *Hijacking can be executed through;*
  - Social engineering
  - Security breach at the registrar
  - Malicious act from within your organization
- *Risks Include:*
  - Theft of valuable client login information
  - Complete domain theft
  - Email takeover – send and receive your emails

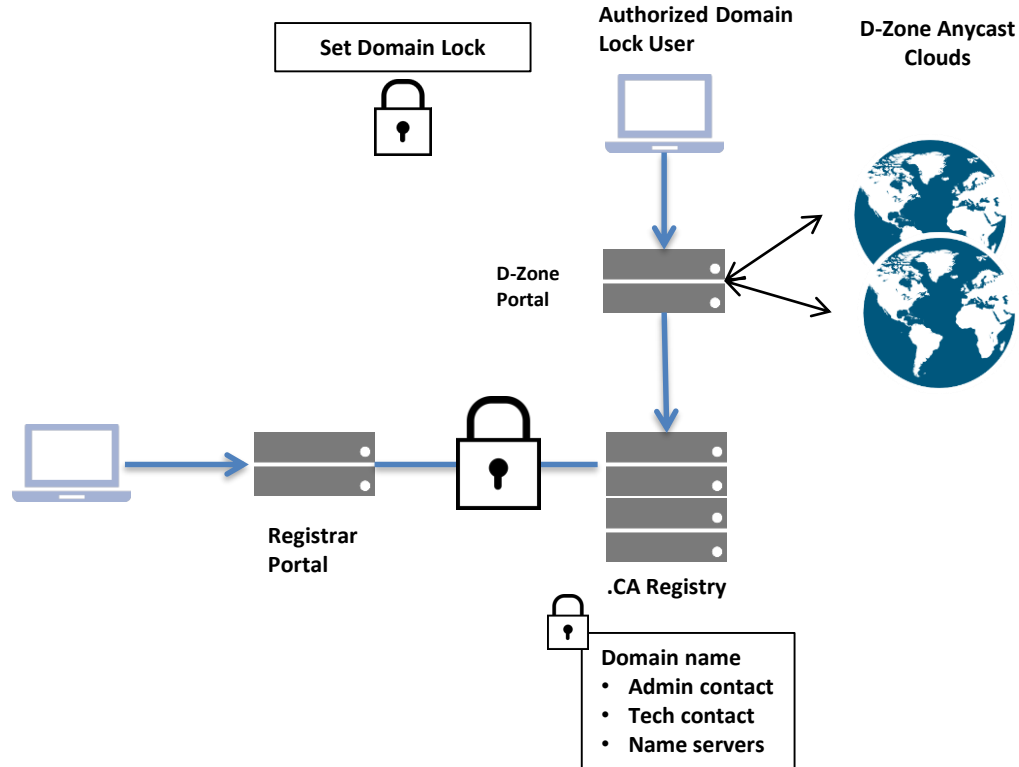

# Preventing Domain Hijacking

*Domain Lock fully protects from hijacking*

- Applies security lock at the registry level
  - Prevents any changes to domain name information
  - Protects from compromise of your registrar account
  - Protects from registrar security breach
- *It is easy to fully protect your domains*
  - Only the owner and admin of the domain can make changes
  - Two factor authentication mandatory as a guard against spoofing

# D-Zone Domain Lock operational flow

...and we keep moving forward

## Common problems our base is facing now

- ISP DNS recursive server outages
- Inefficient routing to CDN content
- Web content filtering scaling with bandwidth
- Protection from malware and ransomware
- Requirement: Affordable secure and highly available recursive DNS service

# Malware Protection with Built-in Content Filtering

Keep malware off the network and block communication  
to command and control with the D-Zone DNS Firewall

# D-Zone firewall protecting Canadian education

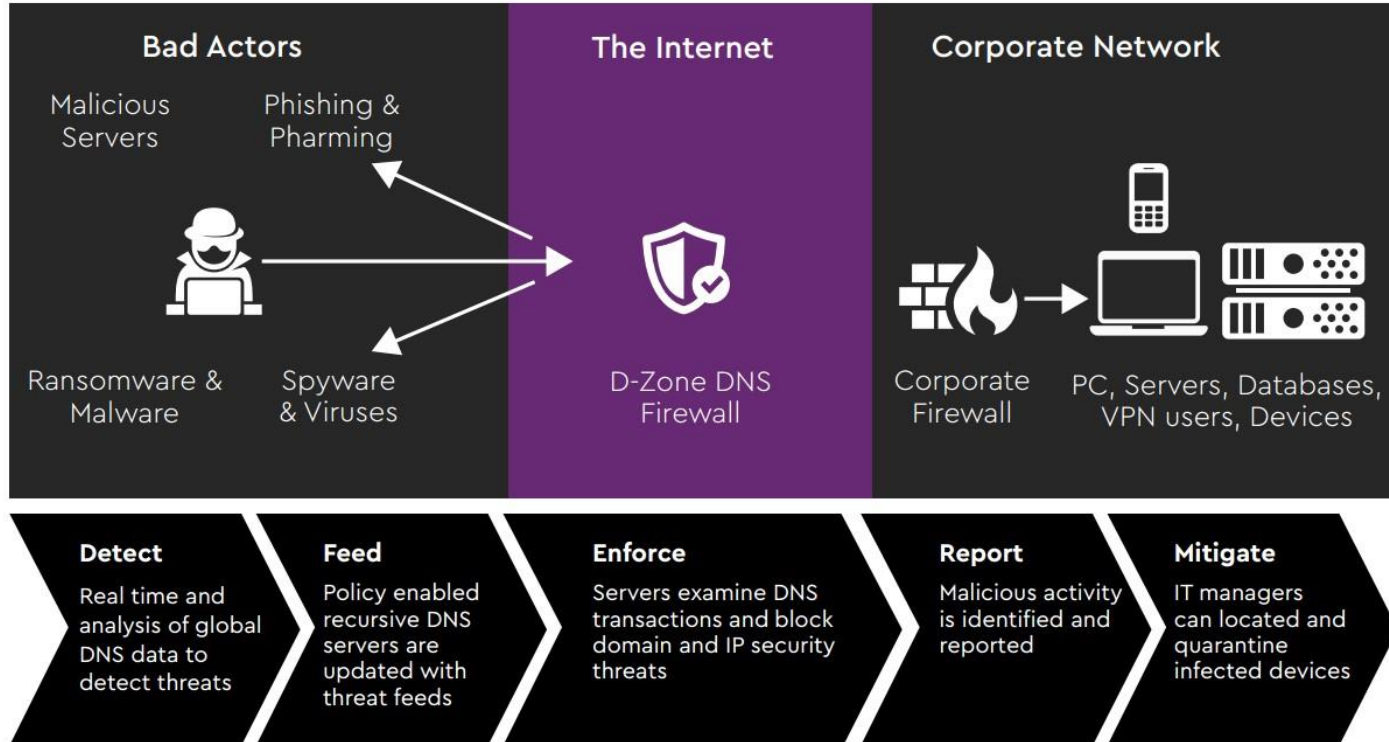

# DNS IS THE FABRIC OF THE INTERNET

- DNS is part of a multi-layer defence in depth approach
  - 91.3% of malware uses DNS
  - DNS is used for command and control
  - Endpoint protection
- is limited
  - IoT
  - BYOD

# D-ZONE FIREWALL RECURSIVE DNS DIAGRAM

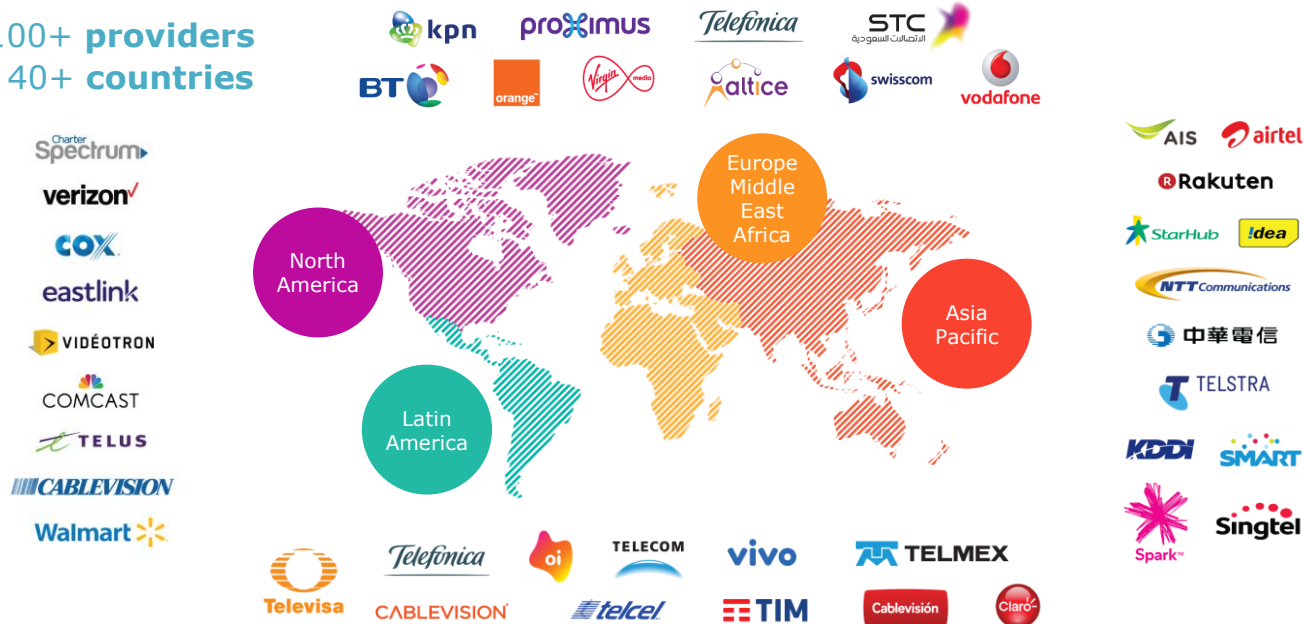

To make this amazing we found an amazing partner!

# Leader in DNS – AKAMAI

100+ providers  
40+ countries

sourced from Nominum

# COMPETITIVE ADVANTAGE IS DATA SCIENCE

Nominum DNS processes  
**6 trillion queries** every  
day.

**More than 400x** the  
combined daily volume of  
Tweets, Facebook likes,  
and Google searches.

## Detect - identify global threats

- Global Intelligence Exchange ( GIX ) analyzes;
  - 100 billion global DNS queries daily
  - Real-time analysis
    - Rapidly classify anomalous activity
    - Rigorously validate suspected threats

## FEED - PROACTIVE REAL TIME SECURITY FEEDS

- Block lists are constantly updated and fed to DNS servers real time
  - Combination of lists from
    - 3<sup>rd</sup> party external lists
  - Lists generated from DNS data
    - 20 minutes from detection to block list
    - 95,000 domains added daily

## ENFORCE

- Policy enabled caching recursive DNS servers
  - Compare incoming DNS queries against lists
  - Blocked queries are redirected to a web page
  - Real time updated lists

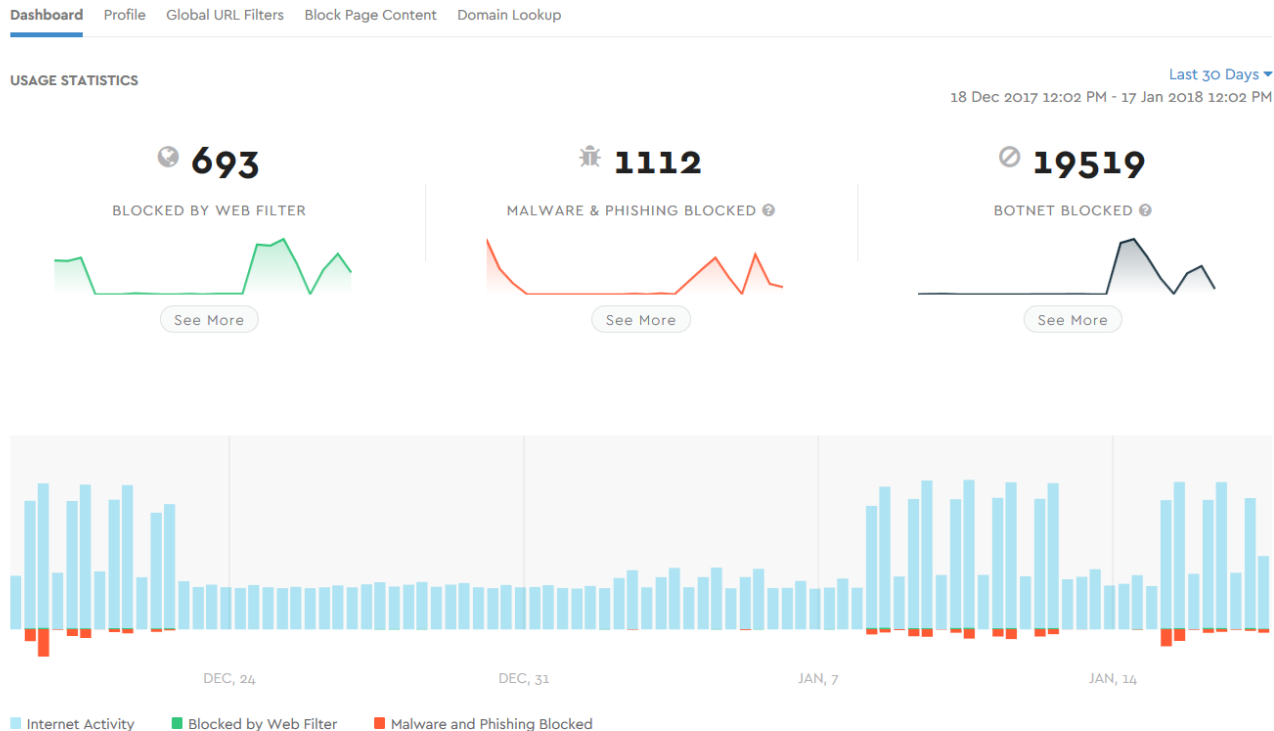

## REPORT AND MITIGATE

- DNS query traffic
- Detect and report malware
  - What queries were blocked
  - What threats were they associated with

# D-Zone blocking malware and ransomware

\*Certain websites and apps remain active in the background even when not directly in use

# Total control over content filtering options

## D-Zone firewall recursive DNS deploying across Canada

\*connecting to local IXP's

- Help support a cross-country network of Internet Exchange Points

- ✓ Faster
- ✓ More Reliable
- ✓ Sovereign

# Configuring D-Zone Firewall = 4 Steps

**Step 1.** Provide me the IP address from which your DNS queries will be routed. In addition we need the IP address for all possible egress points from your network.

**Step 2.** Log in to the D-Zone Firewall portal to perform the following:

- a. Configure your web filters
- b. Enable Google Safe Search
- c. Enable Malware and Phishing Protection

**Step 3.** Save your settings

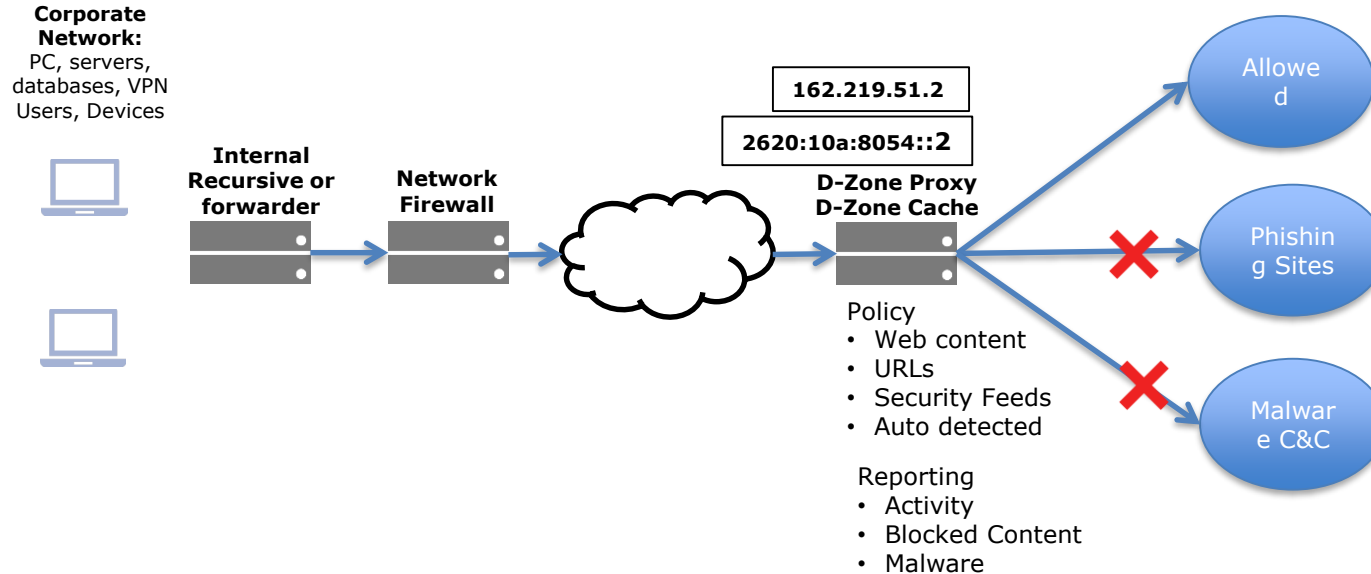

**Step 4.** Direct your DNS queries to D-Zone using the following IP anycast addresses:

**IPv4** 162.219.51.2

**IPv6** 2620:10a:8054::2

# D-Zone firewall operational flow – step 4

# D-ZONE RECURSIVE DNS FIREWALL & CONTENT FILTERING

- ✓ Cloud based - easy to implement with no hardware or software install
- ✓ Automatically updated block lists protect from new threats that appear globally within minutes
- ✓ Cost effective for Canadian higher education
- ✓ Based in Canadian IXPs
- ✓ You're all welcome to an evaluation – we'd love to hear your feedback

# Wendy Blake from Thompson Rivers University

  
THOMPSON RIVERS  
UNIVERSITY

THANK YOU!
