# Introduction

# Why should we care?

## Langara Cloud Story

- 2010 : Microsoft BPOS ..... US
  - 2012 : **Desire2Learn** (now BrightSpace) ....Student LMS... Canada
    - 2013: **Global Relay hosted Zimbra**...Email... Canada
      - 2017: **O365 for Employees**....Email... US (in Canada now)
        - 2018: **Workday** .... ERP....Canada
          - 2019: **O365 for Students**....Email
            - .....
- **2022: 30+ Cloud software**
  - **Misconception...SaaS/Cloud = no work for institution?**

# Risk Assessment of SaaS and Cloud Services

| ON THE ROAD...   |                            | IN THE CLOUDS...   |
|--|----------------------------|--|

Data Management

..... Nthusi

# Data Management

## Data Access

- Authentication: MFA / 2FA
- Authorization: User profiles provisioning / de-provisioning, any third party access to data

## Encryption

- Cloud-Based Encryption
- Bring Your Own Key (BYOK)
- Hold Your Own Key (HYOK)
- AES 256-bit encryption

## Data Ownership

- Rights to use, disclose
- Intellectual property rights
- Data shared with fourth-party

# Data Management cont.

## Data Transmission

- Security controls for data transmitted between the user and the provider
- Security controls for when the provider transmits data from one location to another (if applicable)
- Verify provider data leak prevention capabilities

## Data Integration

- Process flow and a detailed data flow diagram
- Integration requirements with other solutions
- Data format(s) used (e.g. files on secure FTP or service calls)

## Data Storage

- Storage location and how will the data be stored
- Data tenancy segregation / multi-tenancy
- Controlled access to the data and storage media
- Stored data protected / secured by the provider (e.g., encryption)

# Data Management cont.

## Data Backup

- Data back-ups stored on-site / off-site
- Verify if there is any subcontractor involvement
- Verify process to restore data from the provider's back-up

## Data Retention

- Cloud data retention policy, in alignment to FIPPA, PCI, who enforces it, and verify if any exceptions
- Cloud data ownership, SaaS provider\user
- Retention period for sensitive data (alignment to FIPPA)
- Exit Strategy – recovery of data during termination
- Data destruction certificates

## Disaster Recovery

- Natural disaster (master service agreement force majeure clause )
- DRP and BCP policy
- Restoration procedures
- Service-level: Recovery Time Objectives (RTO), Recovery Point Objective (RPO), Maximum Tolerable Outage (MTO)
- Failover site location and certified to the same standards as the primary facility

Attestations

..... Robert

# Attestations

## SOURCES OF COMFORT

### ATTESTATIONS

- SOC 2 type II
- ISO 27000 series certifications
- PCI-DSS
- Other audit reports

### VENDOR DOCUMENTS

- Terms of Use
- Privacy Policy
- Penetration test and vulnerability reports
- Vendor “trust centre” documentation and whitepapers

### REPORTS

- BitSight
- Industry news reports

### TOOLS

- CAIQ – Consensus Assessment Initiative Questionnaire
- HECVAT – Higher Education Common Vendor Assessment Tool

### QUESTIONS

- Ask questions that matter to **your** organization

Privacy

..... Joanne

# Why Assess Privacy Risks?

- Comply with *Freedom of Information and Privacy Act* requirement to protect personal privacy:
  - **Prevent** unauthorized collection, use, and disclosure of personal information stored inside or outside of Canada
  - **Identify** initiatives that involve personal information
  - **Document** controls put in place by institutions, service providers, and commercial data centres to protect privacy
  - **Decide** whether to proceed by using assessments to make informed, risk-based decisions

# Why Assess Privacy Risks? cont.

- Organizations that protect and respect privacy:
  - ***Instill*** trust and confidence in our operations
  - ***Enhance*** our public reputation
  - ***Improve*** our competitiveness against others in our sector

# When to Assess Privacy Risks

Use Privacy Impact Assessments for:

- **New** initiatives
- **Significant changes** to existing initiatives
- **Sensitive** personal information **stored outside of Canada**

# How to Assess Privacy Risks

- No **one size** fits all
- Establish **thresholds** for the level of assessment to be completed
- Identify responses to risks that are in keeping with the **level of risks** assessed

# Q&A

# Risk Assessment of SaaS and Cloud Services

## MYTHS and MISCONCEPTIONS

Removal of the FIPPA data residency restrictions means a privacy notification and obtaining consents are no longer required...

The SaaS vendor is now responsible for properly protecting our data....

The vendor is hosting its applications on AWS / AZURE / GOOGLE and using their security, so there's nothing to worry about...

The vendor follows "industry standards", so there's no need for concern

The vendor encrypts data at rest, so there's no need to further encrypt any of our sensitive data...

The vendor has breach notification processes, so we don't need to have our own processes or worry about this...

The vendor is smaller shop, so we shouldn't ask / expect them to protect our data as well as the big vendors...
